

Commitment to Dental Water Safety

"The Centers for Disease Control and Prevention (CDC) recommends that dental unit water used in nonsurgical procedures measure less than or equal to 500 colony forming units of heterotrophic bacteria per milliliter (≤ 500 CFU/mL) of water, the standard set for drinking water by the Environmental Protection Agency (EPA)."

- The American Dental Association

Sterisil, Inc. recognizes this dental practice for their commitment to patient and clinician safety, as demonstrated through the use of shock treatments, bacteria testing, and continuous maintenance treatment of dental unit waterlines. All of which aid in the delivery of dental handpiece water that meets the CDC and EPA drinking water standard.

STERISIL® *Dental water safety, made easy and reliable*
